

Dial-A-Fix is a handy user interface to perform tasks which are usually used when repairing computers after Spyware/Adware/Malware damage.

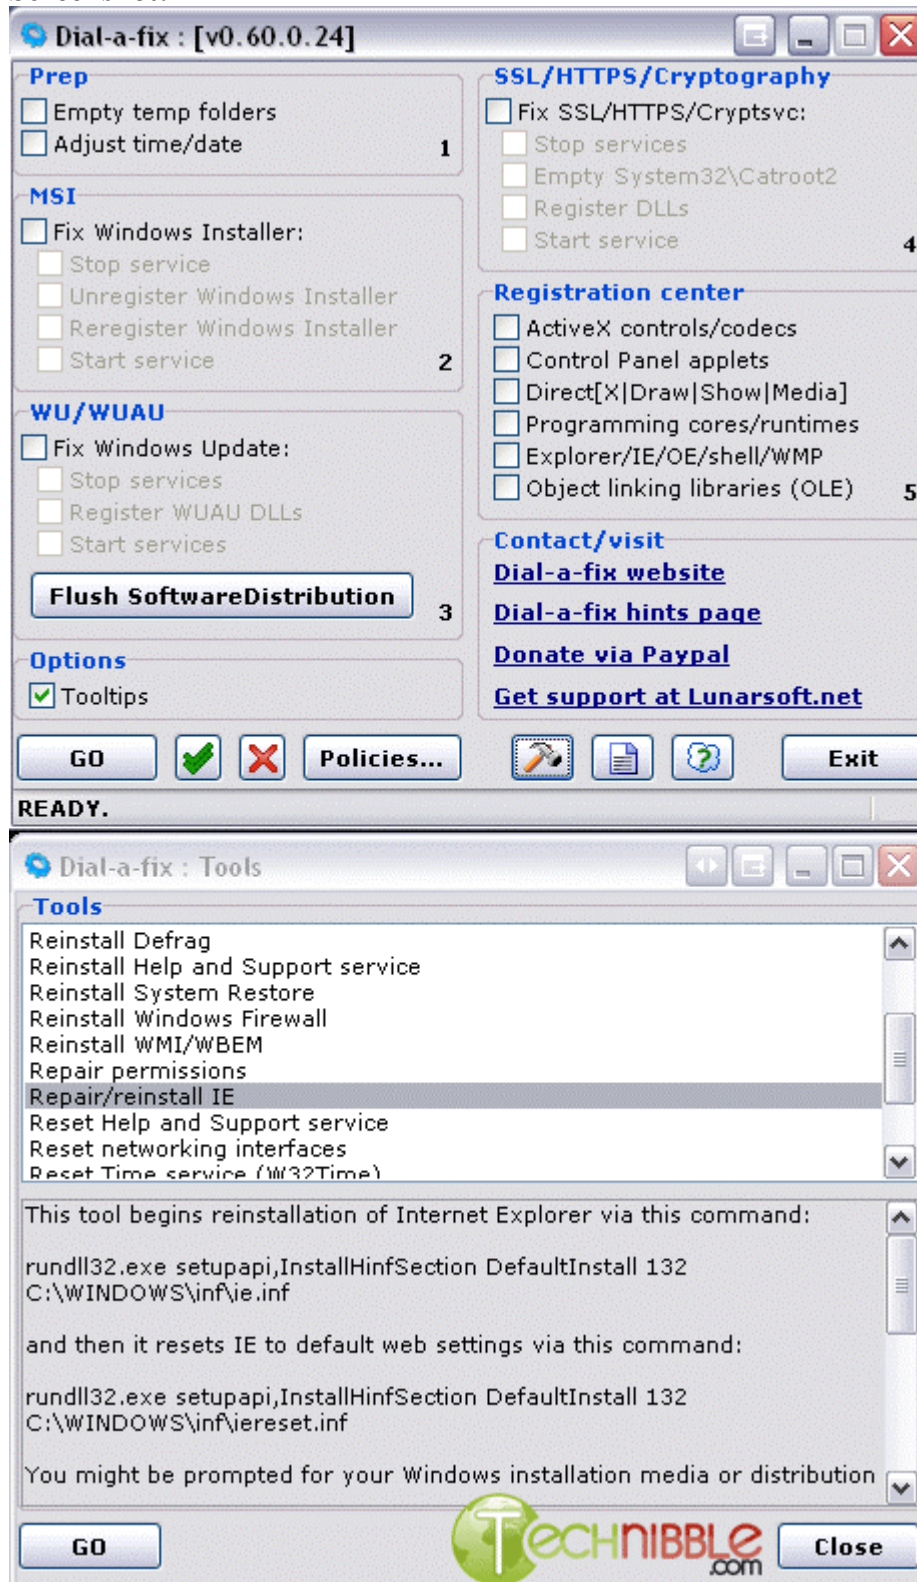

Dial-A-Fix allows you to:

- Re-register Windows DLLs: Frequently used when [Internet Explorer wont connect to secure websites](#).
- Repair Active X Controls, Control Panel Applets, Direct X & Windows Media Player
- Fix Windows Update: Frequently used after a virus attack destroys the ability to update your windows.

It also has a series of other handy tools such as:

- Flush DNS
- Flush Icons
- Process Idle Tasks (used to clear ram)
- Reinstall Automatic Update Service
- Reinstall BITS
- Reinstall Defrag
- Reinstall Help and Support Service
- Reinstall System Restore
- Reinstall Windows Firewall
- Reinstall WMI/WBEM
- Repair/Reinstall IE
- Repair Permissions
- Reset Networking Interfaces
- Reset Help and Support Service
- Reset Time Service
- Reset WMI/WBEM
- SFC Purge (system file checker files)
- SFC Scan
